PaperVision Capture Desktop offers extraordinary flexibility and powerful capture.

PaperVision Capture Desktop is designed to support a wide variety of capture processes with greater ease and efficiency.

PaperVision Capture Desktop
offers the latest in document capturing and processing!

- Simple point-and-click interface requires minimal training.
- Index documents using 1D and 2D barcode recognition as well as zonal and full-text OCR.
- Includes extensible export option including templates for PaperFlow® and ImageSilo®/PVE XML, ASCII with images, Image Only, Hyland OnBase, OTG Record Out and others.
- Paper Vision Capture Desktop offers the most options and the easiest integration with Microsoft SharePoint right out of the box!
- PaperVision Capture NOW!® will allow for immediate scanning and export capabilities without having to index or OCR documents.

Plug n Scan

- Intuitive, ribbon-based user interface makes navigation easy and efficient.
- No database is required to run PaperVision Capture Desktop.
- The PaperVision Capture NOW! application, which is installed in conjunction with PaperVision Capture Desktop, enables quick scanning and converting of images to full-text PDF, image-only PDF or multi-page TIFF files.

Job Configuration Made Easy

- Wizard driven interface streamlines set up tasks.
- Easily switch between basic and advanced job settings.
- Insert auto document breaks based on image file size, pages per document, barcode zones or OCR zones.
- Configure how pages are rotated as images are scanned in the application.

Scanning…On the Fly

- PaperVision Capture Desktop supports all the latest scanners.
- Image processing, barcode reading and zonal OCR can be executed while scanning documents.

Intelligent Indexing

- "Match and Merge" automatically populates index fields with data from existing databases or files.
- Configure barcode and OCR zones to automatically populate index values.
- During index configuration, configure custom code events that are triggered when index fields are populated or validated.
- Use index masking to apply a specific format for index values entered during hand-key indexing.
- The Auto-Carry/Auto-Increment settings can greatly increase your productivity without hand-keying repetitive or incremental values or characters.

Barcode Brilliance

- Configure barcode zones to automatically insert document breaks or populate index fields while scanning documents.
- Over 25 one and two dimensional barcode types are supported!

Image Processing Power

- A variety of image processing filters are available for configuration, including several page deletion filters, image redaction, and rotation filters.
- Apply multiple image processing filters in any sequence, such as noise, line, border, hole removal, etcetera.

Zonal and Full-Text OCR Enhancements

- The OCR engine by Open Text Corporation provides accurate and consistent results during zonal and full-text OCR processing.
- Configure OCR zones to automatically insert document breaks.
- A variety of full-text OCR outputs are available for selection, including Text, PDF, PaperFlow® and PaperVision Enterprise®.

Export Wizard's Flexibility Works Like Magic

- Off-the-shelf scripts for export of document, including full-text data, to PaperVision Enterprise, Microsoft SharePoint® and select third-party applications.
- Upload PaperVision Enterprise XML and PaperFlow data groups automatically to ImageSilo using FTP or FTPS (Secure FTP).
- Advanced options allows users the ability to create more sophisticated exports to integrate with any application.

Automated Processing Options

- During automated processing, options include processing all documents in the batch (regardless of whether previously processed) or skipping documents that were already processed.
- Greater flexibility enables or disables specific automated tasks (for example, if IP filters, full-text OCR, and an export are configured, you can opt to only process IP and full-text OCR for certain batches).

And So Much More!

- Customizable keyboard shortcuts allow users to tailor the interface to maximize productivity.
- Image thumbnail view enables intuitive document navigation and manipulation
- View any document's history and see all actions performed on the document, such as its creation date and name, image additions and deletions and index additions and updates.
- The command line interface enables scanning directly into any line of business application.
